

COMPUTERISED WINDOW TINT CUTTING SYSTEM

Developed and Produced by Altapac Services Pty Ltd

**PRECISE
ACCURATE
EVERYTIME**

QUESTION?

- How can you save time on hand cutting window templates off old and outdated templates frames?
- How can you making sure the kit fits perfect every time, all while using the least amount of tint per car and in the least amount of time?
- How can you pocket a greater margin?

THE ANSWER IS ALTACUT!

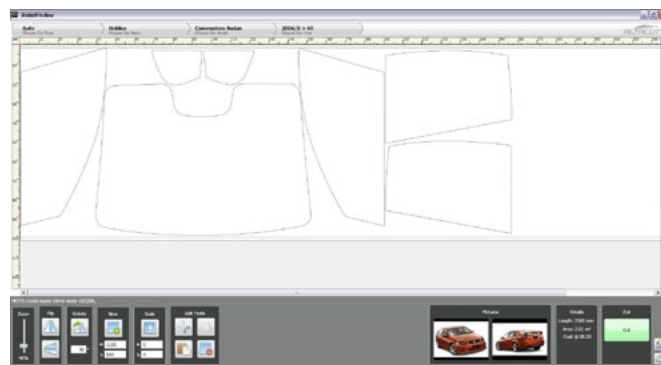

SO WHAT IS ALTACUT?

Altacut is a computerised automotive window tinting program that includes a database of over 1000 automotive window tinting templates.

Altacut uses a user friendly computer interface to select the appropriate make, model, and year of the vehicle being tinted as well as displaying a picture of the vehicle to confirm its identity.

After this the window templates are sent to the plotter that accurately cuts all windows of the vehicle in a matter of minutes. More importantly it cut all windows using the most cost effective nesting techniques to minimise wastage.

Altacut arranges the window templates for maximum use of materials, or rearrange them yourself! Instant Access to new car templates will be made available as they occur.

COMPUTERISED WINDOW TINT CUTTING SYSTEM

Increase efficiency, save on materials and increase productivity.

Australia's leading automotive window tinting system that comes to you direct over the Internet.

1
The Window film is cut to shape through the Roland plotting machine.

2
The excess film around the cut windows is removed and the backing sheet is left intact

3
The pieces of film for the windows are now ready to be applied.

The Altacut technology provides many advantages for today's window tinting businesses that are looking to streamline their operations.

Here are just a few: -

- The patterns are carefully cut according to established specifications, so any trimming that you may have to do will be minimal.
- The Altacut plotter takes a downloaded pattern and cuts it in a matter of minutes, as opposed to the time necessary to cut an entire job by hand.
- Tinter can have the time consuming and tedious task of template cutting removed and spend more time tinting cars.
- Computerised cutting avoids the need to keep cardboard or backing sheet templates of each and every make and avoid damaging them from constant use. This provides a space saving and storage solution.
- Altacut avoids making templates on the outside of vehicles that can result in costly damage to the cars exterior.
- All windows in the Altacut database are pre-nested on a 40" (1060mm) roll width to be as economical as possible. Windows can be added, deleted, repositioned, scaled and rotated with ease. Altacut therefore takes away the need for tinters to try and nest every window for a vehicle using templates.
- Other possibilities to expand business and revenue in other areas such as vinyl cutting etc.
- Allows precise tracking of all tint stock that passes through the cutter.
- Pre-cutting tint templates to increase productivity from tinters.
- Great for mobile tinters.

All you need is a computer, Internet connection, and plotter of which can be purchased from Altapac including an on-site training and installation program.

How can it save/ make my business money

Reduce direct costs per car and save on wastage. Window tint templates are input into the Altacut program and then arranged within a 40" roll width to minimise the total area of film used and in so eliminating up to 20% of waste incurred by hand cutting. It is perfect for businesses and installers undertaking mobile installation as you are able send installers out onsite with pre-cut kits and thus maintain tighter levels of inventory control.

Get more productivity from your employees.

Give your tinters the ability to tint more cars each day and without cutting corners. The time saved by not having to worry about cutting the window templates – efficiently and accurately can be invested in tinting extra cars.

Improve your stock control.

The Altacut program will allow you to track and account for all your film by recording all the tint that passes through the plotter. You can take control of every square millimetre of film that is cut.

Train new tinters in half the time.

Reduce the time needed to train new tinters as the need to make and cut templates is taken over by the Altacut system. The painstaking process of cutting templates accurately and consistently for each and every car is no longer necessary, as the Altacut program and plotter will do it exactly the same each and every time.

Give your business a competitive advantage.

What a great selling tool to tell your customers that the tint for their car will be cut from a computer using a cutting plotter.

What do I need to get started.

All you need is a computer with a dial-up Internet connection, a cutter and subscription and you are on the way.

The Altacut Automotive Window Tinting basic kit includes:

- Roland 46" or 54" Cutting Plotter
- Access to the Altacut database of over 1000 vehicles
- Free updates
- Unlimited Online Support
- Access to Online Support

Make your business more productive, more efficient and more profitably by using the Altacut system. The investment pays for itself by minimising tint wastage, getting more productivity from your tinters and more easily account for your tint stock .
